

# Vigna Ramtej Telagarapu

9032149776 | vignaramtej46@gmail.com | linkedin.com/in/vignaramtej | github.com/ramtejavigna | Portfolio

## Technical Skills

**Languages:** Java, Python, JavaScript, TypeScript

**Backend:** Node.js, Express.js, Flask

**Frontend:** Next.js, React.js

**Databases:** PostgreSQL, MongoDB, MySQL

**Cloud & Infrastructure:** AWS (Lambda, Cognito), Docker, Serverless Framework, CI/CD, Prisma ORM, Git

**Core Concepts:** REST APIs, Authentication & Authorization, OOP, Design Patterns, Data Structures, ACID Transactions

## Work Experience

### Backend Developer Intern — Secure Blink

Aug 2025 – Dec 2025

- Designed the monolithic APIs into a serverless Lambda architecture, which reduces cold-start latency from 2.3s to 890ms (61% improvement).
- Implemented role-based access control (RBAC) system securing 15+ API endpoints and preventing 3 unauthorized access attempts.
- Built a static code analysis engine that identifies critical OWASP Top 10 vulnerabilities across client codebases

### Full Stack Developer Intern — Labfox.Studio

Mar 2025 – May 2025

- Optimized the app through code-splitting and reduced the initial page load time from 5.2s to 2.5s (50% improvement) which results in 18% decrease in bounce rate and 12% rate increase in session duration.
- Architected reusable React component library following atomic design principles.

## Projects

### Code Battle Ground - Coding Arena

Mar 2025 – Sep 2025

**Tech Stack:** Next.js, PostgreSQL, Docker

Repository: [github.com/ramtejavigna/CodeBattleGround](https://github.com/ramtejavigna/CodeBattleGround)

[Live Demo](#)

- Designed multi-tenant competitive programming platform with authentication, real-time leaderboards, and automated judging, supporting code submissions across live contests
- Engineered PostgreSQL database schema with ACID-compliant transactions and optimized indexes, ensuring zero data corruption incidents under concurrent submissions during peak contest traffic.
- Implemented Docker-based code execution sandbox with resource limits (512MB RAM, 2s timeout), successfully isolating and executing untrusted code submissions across 5 programming languages with zero security breaches

### Vedic Baby Names - CRM

Oct 2024 – Dec 2024

**Tech Stack:** React.js, Node.js, Express.js, MongoDB

Repository: [github.com/ramtejavigna/CRM-vedic](https://github.com/ramtejavigna/CRM-vedic)

[Live Demo](#)

- Developed full-stack CRM system automating customer name generation and delivery workflows, serving customers and reducing manual fulfillment time from 15 minutes to 2 minutes per request (87% time savings)
- Built Express.js backend with MongoDB, implementing secure authentication, data validation, and error handling middleware that reduced server errors by 70% and maintained 99.2% API availability
- Decreasing perceived load time by 50% and improving user engagement by 30% based on analytics data

### AMILE – Career Development & Talent Networking Platform

May 2024 – Aug 2024

**Tech Stack:** React.js, Node.js, MongoDB

Repository: [github.com/ramtejavigna/AMILE](https://github.com/ramtejavigna/AMILE)

[Live Demo](#)

- Contributed to development of career platform connecting students with mentors and resources, implementing 11 backend API endpoints and 8 frontend features across 4-month development cycle and NLP based system for mock interviews
- Enhanced system reliability through comprehensive error handling and input validation, reducing production bugs by 60% and improving average API response time from 450ms to 180ms (60% improvement)

## Education

**Sagi Ramakrishnam Raju Engineering College, Bhimavaram**

*Bachelor's in Artificial Intelligence and Data Science*

CGPA - 8.51 / 10.00

2022 – Present

## Achievements

- Winner** - Hackoverflow 2K24, national-level hackathon.
- Best Junior Team** - Smart India Hackathon (Internal) 2023, among 250+ teams.
